

Package Buddy

Description

Quite simply, PackageBuddy^a adds Package exporting ability to your Newton. For example, you're no longer using the Pocket Quicken which came with your Newton, but you're not sure if you want to delete it. Now you can export it to your Macintosh computer and recover that space on your Newton. The windows server is almost done, it should ship soon.

We're releasing it as a freeware application to the Newton Community as our attempt to up the ante; there is too much shareware that costs more than it's worth. It won't work with 1.x systems; upgrade to 2.0, it's worth it.

If you really really like it and want to send us money for beer and sushi, we won't complain. The address is: 19970 Latigo Ln. Parker, Co. 80134

Thanks

Many many thanks go to Steve Weyer and Greg Simon, developers of NewtsCape. This product would have taken much longer to write had it not been for their generous help and donation of the package conversion function. Thanks for Apple Computer and David Fedor, the product uses the DIL's for comms. David's assistance was most invaluable.
